

Digital Caliper (Vernier) 150mm Metal Casing IP-67

Digital Caliper (Vernier) 150mm Metal Casing IP-67

Our water resistance calipers may look the same as others but once you touch, feel and use them you'll know they are more than just 'pretty', they have personality too. The sliding action is nice and smooth, there's no grittiness or binding. The repeatability is consistent, you can open and close the jaws a number of times and they will reliably return to zero. The body parts have been machined clean and tight so there is virtually no lateral play in the jaws. The display is clear and the segments are all equal contrast. They are a pleasure to use because they feel 'dialed in' and just work like they should!

They can measure 4 ways - inside, outside, depth and incremental making them ideal for general engineering, metalwork, checking drill bit sizes, measuring shell casing flaring (when ammo reloading), making jewellery and many other uses.

SPECIFICATIONS

Range 0-150mm (6 Inches)
Accuracy 0.01 mm/0.0005 inch
Resolution 0.01 mm/0.0005 inch
Max measuring speed 1.5 m/s
Large 12mm 5 digit LCD display
Battery 1.55V SR44 button cell (included)

FEATURES

IP-67 Water Resistance Casing

Super strong magnesium casing
Made of hardened stainless steel
Lock screw to hold at desired setting
Battery life one year continuous use
Zero button for absolute and differential measurements
Displays millimeters or inches and converts with button
Supplied in strong molded plastic case
Complete with instructions

Also know as Digital Calliper (British spelling)
